

ClearCost™

SERVICE FINANCIAL SOFTWARE

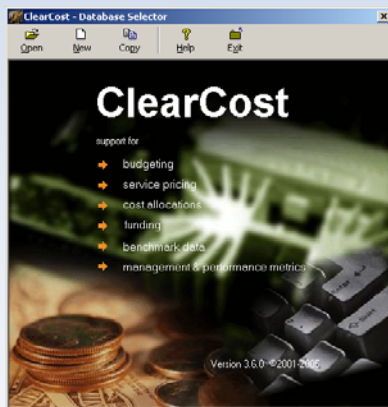

FINANCIAL TRANSPARENCY FOR IT SERVICES

Introduction

ClearCost™ is a unique and proven software solution supporting the following ITIL® processes:

- Financial Management
- Service Level Management
- Service Catalogue Management

Its functionality supports the budgeting, cost allocation, and charging sub-processes of Financial Management. Its foundation is built on cost components and activity-based costs associated with the services that are part of the Technical Service Catalogue as well as the Business Service Catalogue. By means of Service-usage it supports the charging component of Financial Management.

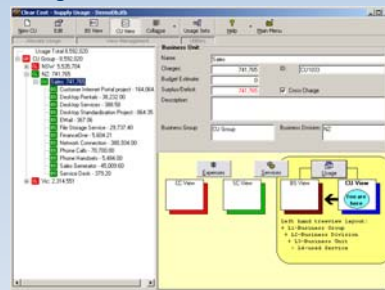

ClearCost™ is being used by operational and finance executives. It delivers immediate and practical results through its features for:

- Detailed Budgets
- Service Costing and Pricing
- Cost Allocation
- Contract Register
- Asset Configuration and Capacity Details
- Benchmark Data
- Extensive Reporting

ClearCost™ saves time and effort reconciling and synchronizing your budget and cost allocation data. It reduces the number of peripheral and disparate spreadsheets often used in support of your budgeting and cost allocation efforts.

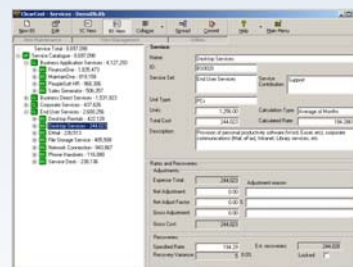

Many ClearCost™ customers have experienced a return on their investment in ClearCost™ within their first budget cycle.

Implementing ClearCost™ is a just a matter of weeks, which includes customization, integration and training.

ClearCost™ Architecture

ClearCost™ is a departmental application supporting multi-user access, including business customers. Its user interface is highly intuitive. Data security is built in at account level and cost center level. It also supports role-based authorization levels. ClearCost™ has flexible import and export features for data exchange with key accounting and service management applications.

Key Functionality of ClearCost™

- Capturing of GL Accounts and Cost Center data
- Mapping of Budget Items to Services, through Activity Based Costing principles
- Asset and Configuration Data linkage to Services
- Linkage of Services to Demand Forecasts, including Service pricing
- Actual Service-usage
- Extensive Comparison & Benchmark Reports
